| PREREQUISITES:  | None  |   |   |     |   |     |  |     |
| CATALOG DESCRIPTION:  | An introductory course in discrete mathematics which concerns the study of discrete structures. The course covers topics such as logic, number theory, induction, set theory, combinatorics, probability theory, and graph theory.  |   |   |     |   |     |  |     |
| RATIONALE:  | The course aims to develop students’ ability to reason mathematically and to write mathematical proofs. It provides fundamental knowledge on discrete objects, such as integers, graphs, and statements in logic that are necessary for the study of algorithms, networks, programming languages, and other related applications in computer science and technology.  |   |   |     |   |     |  |     |
| LEARNING OUTCOMES:  | As a result of taking this course, the student should be able to:<br>1. Demonstrate understanding and execute a variety of proof techniques and write clear mathematical statements.<br>2. Demonstrate understanding of basic number theory concepts and develop numerical representations.<br>3. Apply appropriate counting techniques to application problems and calculate probabilities.<br>4. Apply inductive/deductive reasoning to solve a variety of problems.  |   |   |     |   |     |  |     |
| METHOD OF TEACHING AND LEARNING:                                  | In congruence with the teaching and learning strategy of the college, the following tools are used:<br><ul style="list-style-type: none"><li>• Lectures and class discussions.</li><li>• Homework assignments.</li><li>• Office hours held by the instructor to provide further assistance to students.</li><li>• Use of library facilities for further study and preparation for the exams.</li><li>• Use of the Blackboard course management platform to further support communication, by posting lecture notes, assignment instruction, timely announcements, formative quizzes and online submission of assignments.</li></ul>   |   |   |     |   |     |  |     |
| ASSESSMENT:   | <b>Summative:</b> <table><tr><td>1<sup>st</sup> assessment: Midterm examination (written, 1 hour)</td><td>30%</td></tr><tr><td>2<sup>nd</sup> assessment: Portfolio of student work</td><td>10%</td></tr><tr><td>Final assessment: Final examination (written, 2 hours)</td><td>60%</td></tr></table><br><ul style="list-style-type: none"><li>▪ The first assessment tests Learning Outcomes 1 and 2.</li><li>▪ The second assessment tests Learning Outcomes 1, 2, 3, and 4.</li><li>▪ The final assessment tests Learning Outcomes 1, 2, 3, and 4.</li><li>▪ The formative assessment aims to prepare students for the examinations.</li></ul> <p>The final grade for this module will be determined by averaging all summative assessment grades, based on the predetermined weights for each assessment. If students pass the comprehensive assessment that tests all Learning Outcomes for this module and the average grade for the module is 40 or higher, students are not required to resit any failed assessments. Students are required to resit failed assessments in this module.</p> |   | 1 <sup>st</sup> assessment: Midterm examination (written, 1 hour) | 30% | 2 <sup>nd</sup> assessment: Portfolio of student work | 10% | Final assessment: Final examination (written, 2 hours) | 60% |
| 1 <sup>st</sup> assessment: Midterm examination (written, 1 hour) | 30%   |   |   |     |   |     |  |     |
| 2 <sup>nd</sup> assessment: Portfolio of student work             | 10%   |   |   |     |   |     |  |     |
| Final assessment: Final examination (written, 2 hours)            | 60%   |   |   |     |   |     |  |     |
