CATALOG DESCRIPTION:

Application of psychological theory, diverse methodologies and research findings in the understanding of health, illness and healthcare management. An exploration of the role of clinical parameters and psychosocial factors implicated in the development and treatment of various illnesses. The importance of human diversity in health promotion and illness prevention.

RATIONALE:

This module exposes students to the meaningful interactions of physical and psychosocial dimensions of wellness in understanding health promotion and management of ailment. The module is intended for students who plan to pursue graduate studies in the areas of health/counselling psychology.

LEARNING OUTCOMES:

Upon completion of this module, the student should be able to:

1. Demonstrate in-depth understanding of the major theories that guide the field of health psychology.
2. Critically evaluate the role of mind processes, belief systems, social conditions and culture in health-related behaviours and lifelong adaptation
3. Evaluate how the principles of the biopsychosocial model can challenge the traditional (biomedical) understanding of health and illness.
- 4 Synthesize and summarize evidence from contemporary quantitative as well as qualitative research in the field of health psychology.

METHOD OF TEACHING AND LEARNING:

In congruence with the teaching and learning strategy of the college, the following tools are used:

- Class lectures and discussions
- In-class experiential exercises
- Office hours
- Use of Blackboard Site

ASSESSMENT:

Summative:

1st assessment: Portfolio Self-reflective Journal in Theory and Practice Research Position Paper	60%
Final assessment: Examination Essay questions	40%

Formative:

Class participation in weekly in-class exercises	0%
--	----

The formative test aims to prepare students for the final examination.

The 1st assessment tests Learning outcomes 1 and 4.

The final assessment tests Learning Outcomes 2 and 3.

Students are required to resit failed assessments in this module.
