Master of Science (MS) in Data Science

The MS in Data Science is a cutting-edge program that provides advanced knowledge and practical skills in the science of big data. You will learn to turn real-world data into insights, solutions, and tools that drive decision-making in organizations, and have the opportunity to pursue a Professional Certificate in Business Intelligence and Data Mining with SAS.
Master of Science (MS) in Data Science

Overview

The MS in Data Science is an advanced program of study that prepares students for a professional career in Information Technology, particularly in handling big volumes of data, finding patterns in data, making predictions, and effectively visualizing and communicating data, with the intent to facilitate organizational decision making. Students develop expertise in dealing with various types of data including business transaction data, text data, and images.

The program equips participants with a well-calibrated, theoretical, and practical synthesis of applied mathematics, computer science, statistics, and business information skills. The program allows students to pursue the professional pathway, suitable for immediate professional application, or the research pathway, suitable for advanced graduate study and research. In addition, students who select the professional pathway may choose to pursue an extra qualification, the Joint Professional Certificate in Business Intelligence and Data Mining offered in collaboration with SAS, a leading company in the field of analytics.

Program Structure

Students must successfully complete 12 graduate-level courses, representing a total of 36 US credits. Students must choose one of two pathways: the professional pathway that leads to a professional certificate by SAS, and project work with an organization; or the research pathway that is ideal for pursuing advanced graduate studies in universities or employment in research departments of large organizations.

Curriculum

Required Courses

- Introduction to Big Data
- Exploring and Analyzing Data
- Applied Machine Learning
- Data Visualization & Communication
- Semantic Web
- Big Data in Business
- Storing and Retrieving Data
- Search Engines and Web Mining
- Machine Vision in Data Science
- Natural Language Processing

Option 1: Professional Pathway

SAS Platform for Business Analytics
Capstone Project

Option 2: Research Pathway

Advanced Machine Learning
Thesis

Learning Outcomes

By the end of the program, students should be able to:

- Critically evaluate the techniques for storing and processing big volumes of data, including transaction business data, text data, and images, and to apply the relevant tools.
- Analyze the basic machine learning techniques and apply the relevant tools.
- Articulate business problems using data science techniques.
- Formulate ideas and arguments, and communicate them effectively, both in writing and orally, in an academic or business context.
- Design a comprehensive data science solution, and assess it both from a technical and a business perspective.
- Successfully complete a research project in big data or information science.
- Undertake programming at an advanced level: use advanced algorithms, practice distributed computing, use no-SQL databases.

Flexible Study & Course Duration

The program may be completed in one year (full-time) or up to three years (part-time). Classes run Monday to Thursday from 18:30-21:30. New students are admitted at the start of the fall, winter and spring terms. Completing the program in one year is possible only for students who begin their studies in the fall term.

Career Services & Placement Opportunities

Deree graduate students receive support from the Office of Career Services, which help them connect with the 50,000 ACG alumni around the globe, expand their professional network, and gain access to various job positions. Our graduate students and alumni may also benefit from the Alba Graduate Business School Services, including career coaching, participation in career events and workshops, participation in the Alba annual career forum, one-to-one career advice sessions, and a direct mail list for job posts and career advice.

Admission to Program

The minimum graduate admission requirements are:

- A college or university degree in Science, Engineering, Information Technology, Economics, Business, or a recognized equivalent from an accredited institution
- Evidence of proficiency in the English language: TOEFL, IELTS, Proficiency, or GCSE
- Basic programming and mathematical skills
- Motivation and/or relevant experience to specialize in this area: Evidence of strong motivation to work in the fields of Data Science or Information Technology will be sought in the interview and the personal statement submitted with the application form.

The admissions committee will consider applications from students holding a Bachelor of Science degree from other disciplines, but they may be required to take up to 3 undergraduate courses in Statistics, Mathematics, and Programming, as needed. The courses are assumed to be preparatory, therefore these credits will not contribute toward the master’s completion.

Tuition & Scholarships

Deree strives to provide opportunities to students regardless of their ability to finance their education. For this reason, we offer scholarships to all applicants who have demonstrated exceptional academic performance. A discount policy is also available for organization and ACG alumni.

Why pursue an MS in Data Science at Deree

- Become equipped on various levels with the competencies needed to work in the fields of Data Science or Big Data.
- Accelerate your career prospects by choosing a master’s program that awards a Professional Certificate in Business Intelligence and Data Mining from SAS.
- Experience first-hand how data mining, big data processing, and visualization can be used to extract useful information at scale from raw data (business transaction, text, or image) and how to communicate it in a corporate environment.
- Obtain hands-on experience with advanced programming techniques, distributed processing platforms, and data mining libraries and tools.
- Engage with experienced faculty with significant research experience, who are committed to support you as you develop and advance your knowledge and relevant professional skills.
- Benefit from a flexible program that may be pursued full-time or part-time.

Graduate Program Coordinator

Dr. Dimitris Vogiatzis holds a BSc in Computer Science from the University of Edinburgh, and a PhD in Neural Networks from the National Technical University of Athens (NTUA). Since 2010, Dr. Vogiatzis has been a faculty member of the IT department at Deree, teaching courses in the areas of intelligent systems, theoretical computer science, and programming. Over the past 15 years, he has conducted research in the areas of computational intelligence, neural networks, user modeling, recommender systems, and social networks. He has published over 35 articles in refereed journals and conference proceedings, and participated in 12 national and European research projects. He has served as a collaborating researcher at NTUA, a visiting lecturer at the Department of Computer Science at the University of Cyprus, and as a collaborating researcher at the NCSR “Demokritos”. He has also served as a reviewer at various conferences and journals, and as a consultant to the European Network and Information Security Agency.
